

## JUST GLEANINGS

PROVINCE OF ALBERTA BUYS  
\$5,500,000 IN VICTORY BONDS

Expressing the hope it would help the people reach their quota, Hon. W.A. Fellowes, Minister of Public Works and acting Premier, Tuesday announced a \$5,500,000 subscription by the Province to Canada's Seventh Victory Loan.

The large subscription, heaviest made in any previous single war loan by the Province, brings the total subscription to date to \$6,500,000. The provincial subscription probably will be the largest "special" name subscription to Alberta's loan effort.

## RAIRIE TREE PLANTING

Since 1961 when the dominion forestry service at Indian Head and Sutherland was established over 107 million seedlings have been distributed free to farmers in the three prairie provinces. A few years ago these statistics showed the distribution of evergreen trees for planting a nominal charge of \$1 per 100 trees is made. The trees are shipped out in the spring and with each consignment instructions on how to plant and maintain them.

## SOLDIERS' WIVES FOR CANADA

LONDON—Canadian military headquarters recently disclosed that since the beginning of the war there have been 23,000 marriages between Canadian men and Canadian and British girls. Canadian-British marriages are increasing at the rate of about 500 a month.

In 1939 wives and 1,500 children have been transported to Canada under an agreement whereby the Canadian government takes the responsibility for fast passage of all those wives and children wishing to make the trip.

## ARMY FOOD SUPPLIES

Fear has been expressed in the U.S. that the military food reserves would be thrown on the market at the end of the war and leave a depressing effect on prices. However, the United States Quartermaster General says the end of the war with just enough food to last in overstocked areas for two months. In food depots in the United States the army has not now enough to last six months.

It is felt that Europe would bring cut-off of the U.S. market to the military food orders but no army stocks will be dumped on the home market. The Canadian food supply will be distributed to Europe in bulk to liberated areas.

## MORE WASHING MACHINES

Authorization for the manufacture of an additional 10,000 washing machines for the fourth quarter of 1944 bringing the total monthly figure to 30,000 will be given by the U.T.A.L.

It is unlikely that there will be an increase of washing machines on the market because shortages of labour, materials and parts are still so great that manufacturers have limited production. In the period January-August, only 21,056 were made out of the authorized quota of 23,100.

VOLUME 23; NUMBER 40

CARBON, ALBERTA, THURSDAY, NOVEMBER 2, 1944

\$2.00 A YEAR; 5¢ A COPY

## MUNICIPAL DISTRICT OF KNEEHILL WILL ERECT MACHINE SHED

### To Be Built on the Site Opposite Alex Reid Place

We have been informed that arrangements have been completed by the Municipal District of Kneehill No. 278 erect a large machine shed on their site in Carbon opposite the old Alex Reid office.

The size of the building has not been disclosed, although it is said large enough to allow for a workshop and plenty of space to house all the equipment.

Actual ground out of the grounds and building commenced this week.

The cement foundation is being put immediately and it is hoped that the building can be completed this fall.

### OPEN WHEAT QUOTA'S HERE

Now is the time to buy barley and rye is now open at Carbon and farmers who want all the grain they want to, providing they can find room in their bins, can get a good price for their quota on oats still remains at five bushels per seeded acre, and it is not expected that this will be lifted for some time.

### "The World of Wheat" Reviewed Weekly By Major H.G.L. Strange

When "Futures" trading in wheat was temporarily suspended last year on Winnipeg Grain Exchange, some persons thought that this meant the end of the "Futures" trading in exchange. This was on the pipeline, and appear, however, that on the contrary "Futures" trading in grains and in other products is actually increasing, and is being held in higher and higher estates.

An entirely new "Futures" market, trading in wheat, has recently opened on the Kansas City Grain Market. News comes, too, that trading in "Futures" on the Chicago Board of Trade has been started.

The Saskatchewan government has decided to set up a FEX Exchange for trading in flour in the city of Regina.

There are eight Farmer Cooperative Elevator Companies in the United States have purchased grain elevators in the Midwest.

The one which operates the Grain "Futures" market is merely following the wise action of the American Farmers Reserve officers who have been members of the Winnipeg Grain Exchange where the "Wheat Futures" market is operated.

Those who "Futures" trading in wheat pools have found to be most beneficial, otherwise they would not have retained their memberships during all this time.

**WE BID FAREWELL** —

With this issue of the Chronicle we bid farewell to our many friends and business associates in Carbon and district.

For the past 18 years we have guided the destinies of this weekly newspaper, and although it is time leaving to take up the followed profession at Didsbury, we will always cherish the friends and happy relations we have existed with our subscribers, advertisers and friends, and ourselves.

In bidding farewell we do so only as a temporary measure, for we hope to be back to Carbon frequently and again meet with our old acquaintances.

Your new editor, Mr. Clarence E. Wall, will continue Didsbury's work and will be associated with Mr. Gorder of The Didsbury Pioneer, and he comes well recommended as a printer and publisher. We hope that he will be successful in his new venture and support from our townspersons as has been given to us during the past 18 years. And as long as this support is forthcoming, we will be back to Carbon again.

Being a stranger in Carbon and district, Mr. Wall will find it difficult to get the local news and we hope he will be helpful in assisting us to ask readers to make a special effort to give the local news possible to their new editor.

E. J. ROULEAU

## WEDDINGS

OHLHAUSER—SCHAFER

A pretty wedding was solemnized at the Freudental Baptist Church on Wednesday afternoon, October 25th, between Sam Kallio and Schaefer daughter of Max F. Schaefer of Carbon, Alberta, was united in marriage to Leo Herbert Ohlhauser, son of Mr. and Mrs. Jacob J. Ohlhauser of Carbon. E.S. Fenkell performed the ceremony.

The bride was given in marriage by Mr. John Goss, and ushers of the bride were Clifford Ohlhauser and Arnold Ohlhauser.

Church usher were Art Buyer and Otto Berthel.

The bride was dressed in a white sheer gown with finger-tip veil and carried a bouquet of red roses.

Mr. Lorenz Ohlhauser, sister of the bride was mother of honor and wore a yellow sheer dress and carried corn flowers.

The bridesmaid was Miss Marion Hirsch, wearing a blue sheer and carried pink carnations.

The groom was supported by his brother, Walter C. Ohlhauser, of the town.

Following the ceremony Mr. Walter Berthel sang "O Promise Me" accompanied on the piano by Mrs. Alice Schaefer.

Mr. and Mrs. Ohlhauser left later in the day for a honeymoon trip to Banff, and on their return will make their home at the farm south west of town.

### GIECK—OHLHAUSER

Bethel Baptist Church witnessed the wedding of Randy and Gladys Gieck on June 11, 1944, when Esther Elsie, youngest daughter of Mr. and Mrs. J.F. Ohlhauser of Carbon became the bride. The groom was Fred Gieck, son of Mr. and Mrs. Fred Gieck, alias of Calgary officiated.

The bride was given in marriage by her father, who wore a gown of white sheer. Her floor-length veil was held in place by a bouquet of roses, and a bouquet of carnations.

Mrs. Irene Neber attended the bride, and Mr. Archie Wolfe was groomman. Their ushers were: Mr. F.G. Ohlhauser, Mr. J.E. Ohlhauser and Mr. E. Ohlhauser.

During the signing of the register Mrs. S.F. Torrance sang "O Promise Me" which was accompanied by Mr. E. Ohlhauser, who also played the wedding music.

Mr. and Mrs. Gieck left for Banff to spend their honeymoon. For traveling the bride wore a blue wool suit, topped with a beige coat with black accessories and a corsage of roses.

### WITH THE AIRMEN

Bill Herbert, former chief announcer at the Vancouver studios of the C.B.C. is with the corporation's overseas unit, covering the invasion for listeners at home.

Do you know that since the war began vegetable seed production in Canada has become a relatively important industry? Most of the seed of field and garden vegetables produced in Canada were imported from European countries but when these countries were invaded and occupied by Germany, vegetable production became a major industry. With the assistance of the Department of Agriculture, Canadian farmers seeds have even a higher percentage of these seeds than in Europe and are produced in sufficient quantities to meet all domestic needs.

## CARBON UNIT SHOWS PROGRESS IN DRIVE FOR VICTORY BONDS

### Should Reach Quota of \$68,000 By Week End

The Carbon Unit has been showing more active results during the past week and according to Unit organizer S.F. Torrance, the quota of \$68,000 has been subscribed to date having raised \$11,000 more to raise if we are to reach our quota of \$68,000, say to provincial head.

This sum figures out to about \$50¢ of the objective, and it is expected that the quota should be reached this week end, or at the latest early next week.

The people of this district have responded very well to the purchase of bonds, and many individuals have bought a bond, but who have not made an application. To these we urge that they go to the local branch of the Bank of Canada, or to a member of the canvassing committee, or direct to the unit organizer, especially, even if it is only for \$50, and let us help you to fit it on the instalment plan, with six months to pay for it at no interest.

It is important that you make an application and it should not be held up for a week, or longer, if you have a savings account, put every dollar in it into Victory Bonds. The investment is better as far as the interest concerned, and the security is the best there is. What more could one ask?

### PLEASE SEND IN THE NEWS

This newspaper cannot make a difference to house-to-house canvassers for news, but it is always glad to receive a handwritten letter from the news items. Please let us have news items. Our canvassers are open to them. And remember, news must be in before Tuesday, 5 p.m., to ensure publication that week.

### SHOULD FINISH CATTLE

The Alberta Department of Agriculture points out that only well-financed cattle can be disposed of at fair prices in the market. The market stockyards at the present time, there is virtually no demand for thin cattle, so there is little profit in holding them. They should be held over until spring so that they will come on the market after the New Year. It also points out that the market for thin cattle is good business to buy western feeders, cattle and then buy western grain to feed those cattle, it should pay Alberta farmers to combine these two products right on their own farms.

There are only a few more days in which to buy bonds in the present loan. Make your application at once!

### STAMPING MEAT

The Pricers Board stamp, showing slabs of meat, is of great importance and it should not be held up for a week, or longer, if you have a savings account, put every dollar in it into Victory Bonds. The investment is better as far as the interest concerned, and the security is the best there is. What more could one ask?

## Britain And The Future

A GREAT DEAL IS BEING SAID and written just now about the future. Everyone is aware that we are living in swiftly changing times and that conditions will never again be as they were before 1939. There are definite signs pointing to a new era of world-wide competition with the rest of the world. It is clear that social security is an important factor in the post-war economy, and it is also clear that events of the past five years have permanently altered former systems of international communication. These are only some of the changes which we know are now taking place. Another important factor is the speed with which there is now no doubt as to the outcome of the war, but the battle front, the political results are not so clear-cut and there are many points in connection concerning which there are still definite conclusions.

### Peak Of Glory Believed Past

The British people themselves. In certain quarters, the opinion has been expressed, from time to time, that Britain has reached the "peak of glory" and that what emerges from the present conflict will be a "second class power." In support of this argument, it has been pointed out that Russia, with a population of 200,000,000 people, and vast natural resources, appears to be just at the beginning of a period of great expansion, politically and industrially. Thus, also, the United States, with 135,000,000 people, and possessed of great natural wealth, the population of Britain is somewhat over 44,000,000, and in comparison to Russia and the United States, her natural resources are limited, as are her potentialities for increased industrial expansion.

### Some Facts To Be Remembered

Europe, it should not be forgotten, that the people of Britain carried on their shoulders the burden of the war. The courage, tenacity, endurance and determination wavered then, but the future of civilization would be quite different to what it is today. The people of the Empire have stood firmly together in this war, and have added much to an already proud fighting tradition in all the services. For her part Britain has started a program for the improvement of her roads, and has travelled throughout the colonies and declared her intention of extending Dominion roads to India at an early date. In science, invention and the arts the British people have shown that they are second to none, and British statesmen have for generations given the highest forms of wise and courageous leadership. Consideration of these, and kindred facts, leaves no room for thought that Britain's future will be less glorious than her past.

### Farm Workers

#### WE Are Needed In The Winter Time For Essential Work

"This Autumn and Winter, Canadian farmers are expected to help in the processing of products they themselves had a hand in producing during the summer months."

A Department of Labour spokesman made this statement recently commenting on the N.R.S. campaign to recruit 100,000 men for work in eastern Canadian farms.

Meat packing, feed and flour milling are but two of the industries on the look out for men from the farms during their off-season. The largest group of farmers is being asked to help in the work of harvesting, sawmills, pulpwood and engaging in other forest operations. "Sixty thousand men will be needed for this wartime job," said the same spokesman.

In Quebec and Ontario recruitment of men for woods operations commenced on October 1. In Manitoba, Saskatchewan, Alberta and British Columbia, men will not be asked to leave their farms until the campaign will not be launched until the company completes the current laboratory examination and the grueling road tests to which the new tire will be subjected.

Experts agree that heat causes most tire failures and that great mileage could be gained if the problem were licked. Taking a long step toward this solution, the government engineer built a mobile plant to run alongside today's tires and to withstand twice the heat a natural rubber tire develops at high speeds.

This was done by immersing the tires in water heated to 150° F. and then cooling them to 50° F. in a matter of seconds.

The tires were then tested to see if they could withstand a load of 1,000 lbs. per square inch at 100° F. and 150° F. This was done by immersing the tires in water heated to 150° F. and then cooling them to 50° F. in a matter of seconds.

"The Minister of Labour announced the other day that last winter 100,000 men from Canadian farms answered the call to help in the defense effort. Many more men are needed for heavy military equipment and manufac-

tured."

As long as German names in Germany are important in world commerce and as long as they are allowed to control the Ruhr coal and industrial output, the world is in danger of war and threatened with aggression from Germany.

German-Americans are dangerous people. They were, and they will continue to be dangerous. That is why they must be watched constantly and vigilantly.

#### HARD TO LEARN

After reading of the advances which Europe was making in the family jalopy is going to have a rough time of it after the war, says the Christian Science Monitor. "It's going to take some time for the fellows to learn that the jalopies are intended to be used on roads."

England was the birthplace of shorthand.

## Price Control And Rationing Information

Q.—Can I buy a gun for hunting and secure ammunition for it?

A.—No. Permits for buying small arms ammunition for hunting are available only to registered gun owners whose registration certificates are dated before Aug. 1st, 1944. It is to those who now wish to get a gun that the Royal Canadian Legion has had to be second best.

—o—o—

Q.—Would you kindly list the contents of ration book 5 so that I can check my books to make sure everything is in order?

A.—In your new ration book there will be one sheet of coupons, one sheet of priority coupons, goldened in color; two sheets of money, one sheet of two dollar bills, "M" coupons; one sheet of colored "P" coupons; one sheet of blue "R" coupons; one sheet of green "S" coupons; and one card marked "Food Stamp". You may make an error at all, mail or take your book right away to the Local Ration Board.

Q.—Will there be any extra sugar allowed for the making of cakes and cookies? Will there be any extra butter for Christmas?

A.—No extra allowances of sugar are made for such purposes.

Q.—Is there a ceiling price on a used car?

A.—Yes, used bicycles have a ceiling price and if you are planning on getting one or buying one, it would be advisable to get in touch with your nearest Wartime Prices and Trade Board office for information and full particulars will be given you.

Q.—I bought a used card about six months ago. I now want to turn this car in and buy another one. What must I do to get rid of it?

A.—If you bought a used car only six months ago you will not be eligible for a trade-in until January 1945. —o—o—

Please send your questions or your request for the pamphlet "Control in Your Pocket" (the book in which you keep track of your prices) mentioning the name of your town and the nearest Wartime Prices and Trade Board office in your province.

### Increase Tire Life

#### Development Of The New Heated Tepereed All-Plastic Tire

Development of the first "heated" all-plastic tire—a step that eventually may greatly increase tire life—was announced by W. G. Streiff, president of The Goodyear Tire and Rubber Company of Canada Limited. The development is considered of major importance because the tire is designed to whip the passenger into a state of long life heat.

This tire has now been developed and is being laboratory tested at the Akron, Ohio plant. Whether the all-plastic oval ultimately will be adopted by the automobile industry will not be known until the company completes the current laboratory examination and the grueling road tests to which the new tire will be subjected.

Experts agree that heat causes most tire failures and that great mileage could be gained if the problem were licked. Taking a long step toward this solution, the government engineer built a mobile plant to run alongside today's tires and to withstand twice the heat a natural rubber tire develops at high speeds.

This was done by immersing the tires in water heated to 150° F. and then cooling them to 50° F. in a matter of seconds.

The tires were then tested to see if they could withstand a load of 1,000 lbs. per square inch at 100° F. and 150° F. This was done by immersing the tires in water heated to 150° F. and then cooling them to 50° F. in a matter of seconds.

"The Minister of Defence," the spokesman pointed out, "this year as many or more working workers are urgently needed." He continued:

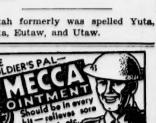

"Whatever course the war in Europe may take 100,000 or more workers will be needed by Canadian indus-

tries now devoted to building military and essential civilian tires."

SURS HAVE AHE MAST

A Berlin broadcast asserted a new U-boat technical development was an "air mast" which would allow German submarines to remain in the surface 20 to 30 days or longer. The mast permits the submarines to receive fresh air while submerged, Berlin said.

Utah formerly was spelled Yuta, Youta, Eutaw, and Utaw.

England was the birthplace of shorthand.

## Rescued Red Devils

Lieutenant R.J. Kennedy of Dunnville, Ont., who planned the rescue of the British Red Devil paratroopers caught at Arnhem. Lieutenant Kennedy, a member of the Royal Canadian Engineers, went out on the whole Canadian operation whereby 200 paratroopers were taken across the lower Rhine in small boats under heavy fire.

## Great Decisive Battles Will Be Fought This Year

**WITH THE BRITISH SECOND ARMY**—The great decisive battles of the war in Europe may be fought this year west of the Rhine, providing the Allies can get an even break in the weather, a British staff officer told correspondents.

The dice are heavily loaded in Allied favor, but it still is too early to predict whether Germany will "collapse suddenly or crumble slowly into defeat."

Explaining that a great Allied breakthrough is in progress—and that one day there will be a hell of a hang—the officer gave this picture of the situation:

"The period we are now going through is like trying one's luck at the slot machine in the pub, but they must realize the tremendous difficulties of supply to be overcome before the starting gun can be sounded for the next big dash."

The struggle is gathering momentum every hour of every day, and the end is just around the corner.

At present Allied armies are in a slogging stage, merely jabbing the enemy and staying alive, but the price they must be paid after the whirlwind drive from Normandy. Gigantic stores must be built up and transported hundreds of miles from the nearest supply point on the front before the Allied armies can march out again in a sustained major smash against Germany.

These jabbing operations such as at Aachen and Nijmegen are necessary, however tedious they may appear, in order to prepare a spring board.

### Due To Drought

#### New South Wales And South Australian Wheat Crop Reduced

**SYDNEY**, Australia.—The current season's wheat production in New South Wales has been estimated officially at 27,000,000 bushels, compared with 47,000,000 last year. The reduction is largely due to drought conditions.

The wheat trade authority said that on the basis of these figures New South Wales would have to import at least 10,000,000 bushels from other states.

In south Australia the wheat crop failure is more serious than the first believed. The drought reduced crop there is estimated at only 5,000,000 bushels with 20,000,000 last year.

### Shoe Investigation

#### Inquiry Regarding Quality Of Shoes Made For Children

**OTTAWA**.—C. H. Wallace, director of the standards division of the prices board, said here that the children's shoe manufacturing industry is under "close scrutiny" because of reports of quality of quality.

Mr. Wallace said the division has assigned two inspectors to shoe manufacturing plants to check on the quality of products. One is examining materials and workmanship in factories in Ontario while the other is checking plants in Quebec.

The inquiry results from complaints from the public about the quality of shoes made for children. In one case, Mr. Wallace said, he has out-numbered by 10 to one similar complaints about footwear for adults.

### Fitting Return

#### British Cruiser Orion Back In Reconquest Of Greece

**NEW YORK**—Announcement that the British cruiser Orion had led a British naval task force back to Greece, anchoring without interference in Piraeus roadstead, contributes a fitting sentimental gesture to the Allied reconquest of that kingdom.

For the Orion was one of the principal victims of the disastrous British evacuation of Greece and Crete in 1941.

Loaded far beyond capacity with troops, she was caught by German dive bombers three times and had May 10 run on the run from Crete to Egypt. Enemy bombs inflicted a heavy toll of dead and wounded on her jammed decks. In a near sinking condition, the 7,215-ton cruiser finally limped into Alexandria.

### KING CAROL

**NEW ORLEANS**—Former King Carol of Romania, who fled native land in 1941 and now is in exile in Argentina, arrived here from Mexico aboard an Argentine steamer en route to Brazil and possibly later to Romania. He was accompanied by Mme. Magda Lupescu.

### British Pipes Play In San Marino

Shortly following the triumphal entry of Allied forces into the town of San Marino, of the Republic of San Marino, British Eighth Army commander, Lieut.-Gen. Sir Oliver Leese, and the regent of the royalist view the ceremonies of a British pipe band before the regent's palace.

## Regulation Of Air Transport After The War

### LONDON

The government, in a new paper, proposed drafting of a new civil aviation convention among all nations to provide for regulation of international air transport after the war and retain the principle of nations sovereignty over their air space.

Canada, in account of her geographical position and her vast numbers of trained air crews, is vitally interested in these British proposals which will be submitted at the forthcoming Empire conference on civil transport, and at the international civil air conference in Chicago next month.

British proposals for international regulation of civil aviation are in keeping with the Canadian draft convention prepared early this year, submitted to United Nations governments and made public in March by Minister of Transport H. H. Howe in the House of Commons.

(As in the Canadian draft convention the British proposals would extend freedom of the air to the right of innocent passage, the right of a nation's aircraft to pass through another's air space, the right to land in a neutral port, the right to refuel, emergency passengers, mails and freight from the country of origin of the aircraft; the right to carry passengers, mails and freight designed for the country of origin of the aircraft.)

Be sides the section on sovereignty of the air, the white paper lays down these proposals for a new convention:

- It should define the degree of freedom of the air to be enjoyed by the ratifying states.
- It should define the international air routes which should be subject to international regulation.

- It should provide for elimination of unnecessary competition by determining the services of all countries operating on any international route and fixing rates of carriage.

- It should provide for licensing international air operators and the cancellation of a license in the event of a breach of obligations.

- It should obtain acceptance by ratifying states of an obligation to provide their own territories the round trip services needed.

The white paper proposed that an international air authority administer the new convention and that ultimately this authority be placed in proper relationship to a world security organization.

### REPORT WAS CORRECT

WITH U.S. TROOPS ON THE ISLANDS.—When American troops first arrived in this sector, they got a scare from Netherlands civilians who said the Germans were arriving in America. Finally, someone looked at a small scale map and, sure enough, there it was—America.

Canada has produced more than 13,000 warplanes since the beginning of the war.

## Canadian Wheat For Liberated Areas Of Europe

**OTTAWA**—A major movement of Canadian wheat and flour for the relief of liberated areas in Europe was marked by a statement of the food trade department stating that a "large quantity" of this food has been requested by the combined food board of the United Nations.

The department said the co-operation of western shippers is being sought to facilitate the movement of western grain to the eastern seaboard. They are being asked to hold back rail shipments of non-perishable food until the special emergency period of grain shipments is over, about Dec. 15, when lake navigation closes.

Officials said they could give no timetable figure of the amounts to be shipped but the transportation trailer, T. C. Lockwood, was asked to provide for 1,450 cars daily for the movement of grain to the lakehead until the end of navigation. This would indicate a maximum amount of 100,000,000 bushels.

In asking the co-operation of eastern shippers in making rail cars available to the west, the announcement said they would be directly aiding in feeding populations of Europe and the Near East in the emergency period.

"It is realized, of course, that this is a tremendous undertaking," said

"It will need the co-operation of all concerned—and this co-operation will surely be forthcoming in view of the present emergency—to enable the railways, lake ships and elevators successfully to perform their functions."

Government instructions to the

### Buy War Savings Stamps Regularly

### Off To Arrange Dunkirk Truce

Capt. W. Wingate-Grey, British staff officer, and M. P. Powells Maurice of the French Red Cross, setting out for the German lines to negotiate terms for the truce at Dunkirk.

### Captures 400 Men And Officers Of Nazi Regiment

Lieut. Paul Levengeur, right, of the French forces of the Interior, who led a contingent which captured 400 men and officers of the German 22nd Grenadier regiment, in Nevers, France, regards the commander of the regiment, a captain, left, and his second in command, an overlieutenant. Lieut. Levengeur's men operate with the French army.

### Commander

Show wearing his new "breast hat" for the first time, is Acting Commander E. D. (Ted) Simmons of Victoria, B.C., whose promotion from lieutenant to commander has been announced. Cmdr. Simmons was the Distinguished Service Cross in 1941 when the corvette H.M.C.S. "Chambly" sank a U-boat. In 1943 he was awarded the Distinguished Service Order when the corvette H.M.C.S. "Port Arthur" under his command destroyed a submarine in the Mediterranean. Commander Simmons now is captain of the new frigate, H.M.C.S. "Beacon Hill," and senior officer of all Canadian naval striking force.

transport control authorities said that the arrangements for movement of grain from the prairie to the seaboard by rail and water should be made at once.

"This will involve the transfer of a large number of empty box cars from Canada to the west and with these a shadow of the days of equipment in eastern Canada until the close of navigation," said the announcement.

The department said due to a particular shortage in Australia, Canada will also have additional obligations in supplying wheat and flour to the Middle East and India.

"For rapid assistance is urgent and action must be taken quickly if it is to achieve its purpose," said the statement in response to the supply of liberated European areas.

Canada has been looked on by the United Nations as a reliable representation administration as one of the few countries with a surplus supply of foodstuffs to be used in liberated areas, mainly wheat. Governments of India and countries expect to make purchases direct in Canada.

The Dominion can afford substantial shipments from her wheat stores. Available supplies are estimated at about 600,000,000 bushels.

Export sales of Australian wheat have run in excess of 100,000,000 bushels in normal times and this market, as well as European needs, could be supplied by Canada.

### Again Rationed

**OTTAWA**—The wartime price of tea and dried fruit is to be held in Ottawa, announced the minister of food. Fruit in glass containers has returned to the list of rationed goods. And they've issued this reminder to housewives: 20 ounces of the fruit is now valued one preserve coupon. But grapefruit juice still remains unrationed.

### Navy Show

**LONDON**—Canada's "Meet the Navy" show has arrived in Britain for a tour of service and civilian centres here and on the continent.

## Canada's Naval Offensive Role In The Pacific

**OTTAWA**—Canada's first cruiser of this war—the medium cruiser *Uganda*—will be commissioned at a United States navy yard, adding a weapon to the Dominion's offensive role in the Pacific theatre.

Uganda, named for the African protectorate, will likely be assigned to strike Japan as soon as the *HMS* *Grenville* arrives. Hon. Leighton McCarthy, Canadian ambassador to Washington, will deliver an address and Vice-Admiral George G. Macdonald, chief of the Canadian naval staff, will be present.

The honor of commanding the navy's first heavy ship goes to Capt. E. R. Mainguy of Chambly, B.C., former promotion from lieutenant to commander having been announced. Cmdr. Simmons is captain of the new frigate, *H.M.C.S. Beacon Hill*, and senior officer of all Canadian naval striking force.

The taking over of the modern *Uganda* cruiser, which is mutual aid-in-reverse, may mark a turning point in Canadian naval development with emphasis on offensive equipment. Navy Minister Macdonald has announced that the *Uganda* will be joined by a number of other ships and has indicated that the *Uganda* may shortly have three aircraft carriers.

The other cruisers will bear names of provinces, but the *Uganda* remains to be named. United States navy yard will hold the ceremony which has already won her battle honors. With the Royal Navy, she was equipped by the protectorate and the Canadian government is keen on retaining the *Uganda* here.

The first trained personnel for a distinctive Canadian naval air arm were recently graduated from the Canadian Naval Flying School.

The *Uganda* will be a high speed ship that will sail some day join her the hard-hitting fleet of Tribal class destroyers to run interference on their flagships for the forthcoming offensive operation against Japan.

It has been estimated that a quarter of Canada's naval personnel and 350 of her fighting ships may be engaged in the Pacific.

There will be a Pacific fleet, too, for the tough fleet of escort ships, which made the R.C.N. such a powerful defence factor during the grim days of the battle of the Atlantic.

### Praises Canadians

#### Air Chief Marshal Calls Work Of Fighter Squadrons Terrible

**LONDON**—Decline of the power of the German air force in the growing might of the Allied air arm is an urgent matter, to be taken quickly if it is to achieve its purpose," said the statement in response to the supply of liberated European areas.

Canada has been looked on by the United Nations as a reliable representation administration as one of the few countries with a surplus supply of foodstuffs to be used in liberated areas, mainly wheat. Available supplies are estimated at about 600,000,000 bushels.

Export sales of Australian wheat have run in excess of 100,000,000 bushels in normal times and this market, as well as European needs, could be supplied by Canada.

If the Germans had any reserve power, he told a press conference, "they would have thrown it at us long ago."

T. S. Trafford, who has been Gen. Eisenhower's air commander since the Expeditionary Air Force was constituted last year, declared:

"The Germans are bound to all that without the air force our armies would never be where they are now."

The air chief praised the "tremendous contribution" of the R.C.A.F. in winning the war since the D-Day assault. Canadian fighter squadrons, he said, were the spearhead of the Allied air forces when the landings in France were made in June and they were the first to operate bases in the Normandy beachheads.

Altogether the work of R.A.F. bomber command—in which nearly 30 per cent. of the air crews are Canadian—has been remarkable, according to the colonel of Dominion air forces and the various European groups in the R.A.F. Sir Trafford said the R.C.A.F. had done "more" than any of the others."

### Depends On Outlay

#### People Through Parliament Will Decide Size Of Post-War Navy

**VANCOUVER**, Va. (UPI)—Gen. G. W. Jones, chief of naval staff, R.C.N., said in an interview here that the post-war size of Canada's navy will depend on the amount of money the people through parliament are willing to spend.

He said the navy so far has not sent any detachment to the south Pacific. The main part of the navy was based in the Atlantic and would be kept there until the end of the war with Germany.

He told reporters that so far the navy had not adopted any first-first-out mobilization plan such as that announced by the air force.

# Canada Is Contributing Supplies To The Peoples Of Liberated Europe Which Will Be Rationed

CANADA is contributing not only supplies to the peoples of liberated Europe but the experience of her rationing system, according to representatives of UNRRA's Bureau of Areas. Rationing is one of the first things to come in the setting up of a stable economic system following the arrival of the Allied armies, they report, and the rationing systems of Canada, Great Britain and the United States have been carefully scrutinized in setting up plans.

Since the guiding principle of UNRRA's entire program is to help others to help themselves, an attempt is made to dictate to the governments of occupied countries as to what form of rationing or price control they shall adopt, economists say, and there is no final application or formula for application to suit any specific locality. Generally speaking, the UNRRA system will follow Canada, in that it will be based on a strict rationing of necessities, and that rationing will be extended only to universally needed goods which can be supplied. No attempt will be made to ration luxury goods.

"It is essential to have the tightest kind of ration control," a spokesman from UNRRA said at a recent Montreal conference.

First step in the institution of rationing in occupied countries will be to control the registration of Europeans, according to UNRRA observers, who are used to registrations, and the system not only guarantees the legitimate use of ration cards but will help to locate members of the population who are subversives and engaged in an attempt to return to their own homes. Police will be in charge of the first registration, with volunteers helping to take their places later.

No universal system of rationing is planned. In some areas, for instance, there will be a surplus of grain, which will make rationing of grain products unnecessary. In others, grain products will be in short supply.

UNRRA insists on maintaining the normal mechanics of trade in each country, the Bureau of Areas reports. There will be no big public soup kitchens, but rationed supplies will be distributed to enable consumers to purchase supplies at stores.

Although a complete set of ration documents has been worked out for application in liberated countries, these documents currently stress that they will not force any government to accept their system. As far as possible attempts will be made to retain any existing rationing plan and to educate what local plans are available.

Many tons of paper will be provided by the administration for the printing of ration documents, but the actual work of printing and administering them will be left to the country itself. According to present understandings from the UNRRA organization, will be there to advise and, where requested, to direct proceedings, but the aim will be to set up the machinery to guarantee a steady diet of ration so that the country itself may carry on.

## This Week's Needlework

By Alice Brooks

Inspired by the antique glass designs, Daisy and Button these crocheted doilies are lovely whether you use them for decoration.

Easy-to-crochet doilies are an asset in every home. Pattern 7248 has individual flower centers; stitches, 14x14 materials needed.

To obtain this pattern send twenty cents to the Canadian Crafts Council, Department of National Defence, Toronto, Ontario, Canada. To be entitled to receive patterns, send name, address and pattern number. Please enclose a stamped envelope. The mailing delivery of our patterns may take a few days longer than usual.

## A Prayer

O God, of yore yesterday and until tomorrow, give us now and never more new hope, new power to overcome tyranny and oppression; and we beseech Thee that Thou will defend and dispense justice in this world, that we may be brought through strife to a last peace.

Protect all those who, at home or abroad, on sea, land, or in the air, are fighting for freedom. May they have Thy blessing in every righteous cause, and the strength to bear any cost and task and peril.

Lord of battles, protect us from the strikes in battles; that the dying may peace and also protection; for anxious families, for the sick, the aged, the weak, and lovers of those now departed from them; for all in stress and trouble, for all who trust in Thee, faith is feeble; and for all bereaved of their loved ones.

We beseech Thee, O Good Lord, as we pray for the speed passing of war, that protection and love together in fairness and peace. Then, out of the misery of the world, let us of Thine own grace mercy to垂下 your hand over us, that we may live together in truth and freedom. May peace endure and universal come at last. Amen.

This simple, powerful Prayer, so often heard at home, radio programs and by radio, is a prayer written by Dr. Judy Hitchcock, radio program director and author of "Prayer Book," as there are no religious books, but as there are no religious books, reading it out loud is another good idea. —Dr. Judy Hitchcock, Frank G. Carpenter Collection, Books & Mail, Toronto, Oct. 2 1944.

## The Front-Line Soldier

**Knows Going Is Tough Even With Wings On His Sights**

Those who are tempted to regard this campaign as a World Series in which our side is sure to win would do well to reflect on the kind of job this is. —Vernon V. Johnson, First World War man, who failed to imagine it, is not too different from the kind of war he fought. It is the kind of war in which the forgotten man and woman in khaki, who made it possible to win, are in London to let victory in France pass on its way unimpeded by civilian fears. Half of General Pyle's anti-aircraft gunners are men, and in a single statistic, it may tribute the countless words and many volumes that tried to pay to British women at war.

## Effects Of Music

**Doctor Finds It Soothes His Patients**

Dr. Mitchell S. Corbett, a Chicago physician, is a firm believer in the soothing effects of music. He and his associates travel about the country giving free performances to patients in hospitals and convalescent homes. The rest is not permanently serious. It is the kind of war in which the breaching of a line, such as the Siegfried, doesn't lead necessarily to the easy running of a map. And when the soldier has been through some weeks of it he may not be sure that he is much farther along than when he started. —New York Times.

## FOUND OUT

When the kindhearted woman shut the door and turned, she found herself faced by her irate mate. "Why on earth did you feed every tramp who comes to the door?" he demanded, heatedly.

"You're no idea," she replied, sweetly, "what a relief it is to see a man eat a meal without finding fault with the cooking."

## TURN AGAINST WIND

The "windmill" wings of an auto-giro turn against the wind, although it is the force of the wind that turns them. These wings are power-driven only when the craft is on the ground.

## Joins Invasion Allies In Snack

A little Greek patrol joins men of a Royal Air Force unit in an early morning "mug-up" snack on the Greek mainland in the Patras sector where successful landings were made by the Allies. This is one of the first photos to reach this country on the invasion of Greece by the Allies

## Handicraft Course For "W.D.'s"

R.C.A.F. Photo

Sgt. Mauritielle Oliver, B.E.M., of Farview, Alta., looks up from the work she is doing during the handicraft course for women at Macdonald College, St. Anne de Bellevue, Que. The course was supervised by Dr. Irene Crellin of the College and financed by the Canadian Legion Educational Services. Here W.D.'s from No. 2 Training Command and Air Force Headquarters were trained as instructors to open Hobby Huts in their stations that other airmen may be given a practical knowledge of hobbies and pastimes. Sgt. Oliver is the daughter of Mr. and Mrs. E. E. Oliver, who won the British Empire Medal last spring in the King's Birthday list for her work in the Educational Department at Air Force Headquarters. She taught school previous to enlistment and was one of the delegation of students from Canada to attend the Coronation in London in 1937.

## British Women

**They Composed Half Of The Anti-Aircraft Command**

Men and women on balloon and gun sites in Britain have mostly had a thin time of it since the war began. They are not paid for working, but as there are no regular wages, they are not paid for working either. The pay scale is the same as Canadian mothers.

But they end the war with a blaze of glory that so far makes no record. Their pay scale is the same as Canadian mothers.

Mr. Seelye's statement on the flying bombardment gave them the honour they have earned. It is the forgotten man and woman in khaki, who made it possible to win, who are in London to let victory in France pass on its way unimpeded by civilian fears. Half of General Pyle's anti-aircraft gunners are men, and in a single statistic, it may tribute the countless words and many volumes that tried to pay to British women at war.

## Hot Lunch

**Mothers Solve The School Lunch Hot Dish Problem**

The vexed question . . . hot food in the children's noonday meal . . . has been solved by another headachy for some Canadian mothers.

The headache isn't necessary, because this knotty problem can be solved very simply, that is, if the school cafeteria or the lunchroom.

Here is how the women in some rural communities have solved their "headaches."

In one community each child brings the food to be heated to school in a covered jar . . . the screw-top kind used for avocados. The jar may contain home-made pâté and a delicious scalloped potato, vegetable casserole in creamy sauce with a sprinkle of grated cheese, good old-fashioned fruitcake, and so on. At recess all the jars are placed in a pan of water on the stove, and by the noon the food is piping hot.

In other rural schools the hot dish problem has been solved in another manner. Each takes turns in preparing a hot dish for the noon meal in sufficient quantity for all the pupils. This plan has worked well and the youngsters love it.

Employing mothers in still other communities have undertaken the task of preparing the hot course at noon. It may be a steaming kettle of rich cream of tomato soup, or a delicious vegetable chowder, or the old favourite, hot foamy nurishing concoction.

However it's achieved, this hot course is needed in almost every family up to health, happy, young Canadians. For this reason, it has the hearty approval of the Nutrition Division, Ottawa, which stresses the importance of hot food in the children's lunch.

## Grim Reminders Of War

Private E. G. Hatton points to bullet holes in this place sign at Cap Gris-Nez, France, grim reminders of the battle for the German strong point southwest of Calais. In taking the place, the Canadians overran the big cross-channel guns which have been shelling the Dover area of England for four years.

# Pictures Life In The Canadian Arctic And Possibilities Of Post-War Tourist Centre At Aklavik

STORIES of life in the Canadian Arctic and opinions on the possibility of developing post-war tourist centres in the North have been brought to Ottawa by Dr. L. D. Livingstone, for 23 years the federal government's medical officer in the sub-Arctic.

Dr. Livingstone says the Indians were becoming rich as a result of the good price for furs, and he said he believed that Aklavik, possibly one of the strongest communities in all Canada, would become a tourist centre after the war.

"It is quite common for an Eskimo to make \$5,000 a year, and with the good prices for furs, he is getting rich," said Dr. Livingstone, who travelled about doctoring Eskimos and Indians from Baffin Island to Aklavik, the community which lies just below the Arctic Circle and the south of which is the Mackenzie River, empties into the Arctic Ocean.

The community, the home for some 75 whites who are mostly government officials, traders and nurses, also is the centre for fur trading, with most of the season's insects out of the way, and with much of the foliage gone from plants which otherwise might rub against a new paint job applied to the winter houses.

Fall is the logical time too to get after the little outside repairs which mean so much to keeping a house in shape, said Dr. Livingstone, that everything is done to make the house as draft-free as possible before the winds begin to blow cold. Fall brings comfortable painting and repairing, while spring is the time to make things snug for the winter.

You will probably be doing those odd little jobs in Kugluktuk when the community with good coal at \$40 a ton is cheap for the Arctic. The price could be less if requirements permit, especially to those who are able to make their own transportation.

However most of the residents of Aklavik are turning to oil. They can buy fuel oil at Norman Wells for 14 cents a gallon, though it is being laid down in the north for \$1.50 a gallon. An oil company has its tank trucks in operation on the Mackenzie river, the price will be less.

Dr. Livingstone is here to help stay and make sure of it he has bought a 40-acre farm near Renfrew, but his friends are inclined to think he will not be able to shake the bone of the North.

## Tale Of Horror

**Cremation Of Children In German Concentration Camp**

An eye-witness account of the gassing and cremation of 4,000 Jewish children in the German concentration camp at Birkenau was given in a London dispatch by the Polish telegraph agency.

The dispatch, signed under the name of a Polish woman imprisoned in the camp for seven months and later released, said the gas chamber was a large room with four doors, each leading to a separate booth. When the door was opened, the gas was released.

More than 65,000 women have died in the camp since it was opened two years ago, the letter stated. These included Russians, Ukrainians, Yugoslavians, Germans and French as well as Polish and Jewish, according to the document. More than 9,000 bodies were cremated in the month of March.

**MILK SUPPLIES IN BRITAIN**

Milk supplies have been prominent in British news. The ancient supply in British Kingdom in June 1944, was 145,025,000 gallons; in June 1945, the third year of peace, the figure was 231,072,000 gallons.

The increase is partly due to the free distribution of milk to schools. There are 30,426 schools participating in the scheme, and the total annual payment of pail of paint will prevent rain on a clear day, but it will not retard, not stop rust which is already eating into the metal.

Skins should be whitewashed as soon as off to protect the screen against rust during the winter. Storm windows should get a coat of fresh paint before they go up.

Leave the paint until the doors are dry, sandpaper the door, and to see that the paint is thoroughly dry before the windows are put on, otherwise the paint will stick and be difficult to take off.

If you are putting new glass in any of the storm windows, be sure to give the window a coat of paint before you put the putty in, and then, of course, you will want a coat of paint over the putty when the job is done. Putty binds and holds much better on new glass which has first been painted.

If you are thinking of a little interior painting as well, there is no time like the fall, the fall along with the fall painting, does not bring the heat of the summer gone, the weather is still warm enough to leave doors and windows open so that the new paint job can dry freely, and so that paint on windows which are left open will not be carried quickly from the house.

## Preparing For Winter

**Fall Is Logical Time For Repairs And Touching Up Paint**

Fall days are ideal for making repairs and giving the home that necessary touch-up with paint. In preparation for the winter ahead, with most of the season's insects out of the way, and with much of the foliage gone from plants which otherwise might rub against a new paint job applied to the winter houses.

Fall is the logical time too to get after the little outside repairs which mean so much to keeping a house in shape, said Dr. Livingstone, that everything is done to make the house as draft-free as possible before the winds begin to blow cold. Fall brings comfortable painting and repairing, while spring is the time to make things snug for the winter.

You will probably be doing those odd little jobs in Kugluktuk when the community with good coal at \$40 a ton is cheap for the Arctic. The price could be less if requirements permit, especially to those who are able to make their own transportation.

However most of the residents of Aklavik are turning to oil. They can buy fuel oil at Norman Wells for 14 cents a gallon, though it is being laid down in the north for \$1.50 a gallon. An oil company has its tank trucks in operation on the Mackenzie river, the price will be less.

Dr. Livingstone is here to help stay and make sure of it he has bought a 40-acre farm near Renfrew, but his friends are inclined to think he will not be able to shake the bone of the North.

## TELEVISION EXPERIMENTS

Dr. Augustine Frigon, recently appointed general manager of the CBC, disclosed that the CBC is experimenting with television in order to erect an experimental station in Montreal. He said television was expensive and it would not become general until a long time after the war.

The banana plant produces its fruit within 15 minutes after the root stock is planted.

Draped curtains, water-pouts, eaves and other metal fixtures are important at any time, particularly now when materials are scarce. Make sure they are well-painted and rust-proof, and if possible, paint them inside to avoid dirty streaks on outside walls which result from leaky drains. If the metal is already rusty, sandpaper the rust off down to the wood, then apply a coat of paint to the wood itself. But take care to see that the paint is thoroughly dry before the windows are put on, otherwise the paint will stick and be difficult to take off.

If you are putting new glass in any of the storm windows, be sure to give the window a coat of paint before you put the putty in, and then, of course, you will want a coat of paint over the putty when the job is done. Putty binds and holds much better on new glass which has first been painted.

If you are thinking of a little interior painting as well, there is no time like the fall, the fall along with the fall painting, does not bring the heat of the summer gone, the weather is still warm enough to leave doors and windows open so that the new paint job can dry freely, and so that paint on windows which are left open will not be carried quickly from the house.

## OUR COMPLETE SHORT STORY—

**"DESTINY"**

— By —

JANET DORAN

McClure Newspaper Syndicate

**ENSURES EASY BAKING—MAKES LUSCIOUS, SWEET-TASTING, EVEN-TEXTURED LOAVES**

**WRAPPED AIRTIGHT TO PROTECT POTENCY—ALWAYS DEPENDABLE!**

**Operational Flight**

Two Polish Pilots Had Interesting Experience

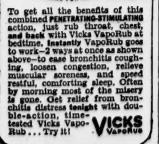

From a press release or from word-of-mouth was given by two Polish war pilots recently. On the same operational flight their Mosquitoes were badly damaged but they went on to the target, bombing it and bringing their damaged aircraft home.

Running into a stream of flak shells which burst so close that the crew could hear the detonations and roar of the engine, a Polish pilot and his navigator suddenly saw their Mosquito quiver. There was a great explosion and the aircraft banked to the starboard wing. Getting it back to level flight and out of the flying shambles, the two continued effort, and the crew found themselves well inside France. Taking stock, the pilot found that a great strain on the steering wheel was necessary to keep aircraft flying level. The instrument told him that the motors were in order, but the navigator examining the airplane reported a leaking fuel tank. The wing, however, decided to carry on and bomb the target which they eventually found, and attacked from a very shallow dive, as the pilot being unaware of the extent of the damage, was unable to get out of the steep in case the wing came off.

They recrossed France at low level and made a normal landing on the first base they saw in England.

**MUCH MORE FUN**

Secondly, a press release suggests that if you send just one box to your serviceman that you include several smaller, individually wrapped packages inside the larger one. Five small packages are more fun than just one.

Now get real relief from coughs, bronchitis, colds—any respiratory ailment—this new medicated vapor rub is the answer.

She would not amount to much, Linwood Haven decided, when the Bellak family and Jim Belknap began hunting chicken crops all over the down place. Lucy was the eldest of nine, but she looked about the middle one with those big brown eyes and that tawny mien that had her. She was a girl and understood, as eager and passionately earnest everything she said and did.

It was Lucy who had the perfect attendance mark in Sunday School each year, though she had been absent a few times and slush from November to April.

It was Lucy who got the rest of the small Belknap from clean clothes made from factory remnants, and marched them daily to the little grocery store in the Haven. Lucy believed in things.

And later, when the chicken venture had proved a failure, and the Linwood National was ready to foreclose if they didn't have a payment, it was Lucy who got a job as a housekeeper taking care of the Haven's house and turned her small salary over to the bank.

Through her remaining three years in high school, she earned money from cleaning paint and doing up curtains to cooking a complete dinner.

She spent little on herself. But her mother always had a good coat and good shoes, and the boys at school.

By that time John Belknap was in the ice business, which, surprisingly, did not pay, and once more the older Belknap children had to step up and help. Lucy had to take her mother to bed, and their father dreamt up a fresh scheme to get rich quick.

The new road was going through that year, and Belknap decided it would be wise to go east his farm to the new town, bring his wife and children, and turn her small errands that are so large a part of work after an air raid.

"After the raid," was an electric shock to Lucy. "We'll be safe now. W.W.S. women might have to get up at four in the morning for days on end to come from their own peaceful houses as reinforcing parties and be at their Centres before the 11 O'clock news."

And in conclusion the directors pointed out that "like all other civil defenders during those dark days in Britain, the women of the W.W.S. had their own homes bombed and their own relatives killed, but they kept on working."

The road went over Winona Mountain and the tourist bubble became a permanent dream. It was Linda's idea to start a gift shop, and her mother and, and there was: "Make A Place for Yourself In Your World." It made front-page headlines in the Linwood Evening Sentinel.

The city editor of the Sentinel asked Linda if she wanted to be a business woman, a subject that would get a business girl nowhere, as anyone in Linwood Haven could testify. It was Linda's idea to learn more about what girls who had married on their minds.

"A girl as smart as that Lucy Belknap should teach," opined the town.

"I don't want to be a teacher," Linda declared, "I like to cook!"

"Bab," Food Shoppe probably a dreamer like her father."

"No food shop ever paid its way in this town," Lucy argued. "This is an industrial center, and people buy grocery products, not home cooking."

That same month the Linwood Trust wanted a payment, or else Lucy stuck her savings deep down in the ground, and the Linwood Trust and Hartford. She landed a job with the Tri-State Utilities Company as a demonstrator, and soon had delighted office members sampling a long sheet of baking-powder biscuits she had made.

"When I have biscuits like those on one of your electric ranges," Lucy said, "medicore cooks will believe they can do the same."

She sent the president of the company around the corner to buy maple syrup to offset the biscuits, then bused herself making an apple pie.

That night she telephoned her mother. "I've got a small apartment, Mother," Lucy said. "I want you to stay with me a while and rest up. Don't go back home until Father gets a job and quits this visionary maternal." Mother, who was very nervous, "We've got to work out all your life, let him see they're still."

The bank took back the farm, as everyone had always known they would. And the Linwood National took one Johnson to live with was Lucy. "Nothing doing," Lucy told her

father. "I'll look after Mother; you make the others take care of you."

"Man hater," John Belknap accused her.

And the blush that betrayed the freckles beneath her smooth make-up was all the answer she gave.

Not when we attended the Lucy Belknap Cooking School and learned how to make her heavenly lemon meringue pie, her featherly Parker House rolls, her delicate soufflés,

Because the man who came along to help her in the sales of kitchen equipment was none other than Brad Hart, whose father was top-man in Tri-State. Brad had gone to Linwood High School.

It was because Brad had gone to Linwood

High School.

It was because

Brad had to have her career. Had to have her career.

It was because he had the most way to watch so much money—and so much worth. Together, she and Brad would weld their careers into the solid foundation on which they'd build a successful marriage. Lucy had always known that to be her destiny.

**Volunteer Workers****W.W.S. In Britain On Duty Day And Night To Help Win The War**

"British will never forget the work of our W.W.S. volunteers," said the directors of the Canadian Women's Voluntary Services, National War Service, recently.

"British women dream day and night, sometimes taking people to shelters from homes at which the flames were already licking" said the directors. "And later, in the great blitz their W.W.S. volunteers" or the hundred and one small errands that are so large a part of work after an air raid.

"After the raid," was an electric shock to Lucy. "We'll be safe now. W.W.S. women might have to get up at four in the morning for days on end to come from their own peaceful houses as reinforcing parties and be at their Centres before the 11 O'clock news."

The commission was headed by Dr. Henry E. Sigrist, professor of history of medicine at Johns Hopkins University, Baltimore, Md. Its report said that the last two days described a remarkable move towards the socialization of essential medical services. And, in a section dealing with rural health services, the report said that the system of establishing rural health centres, 25 years ago had brought medical care to thousands of people who otherwise would not have had any medical attention. The system had been in use for 15 years and had maintained and developed, but with certain defects—such as lack of uniformity—remedied.

However, the report said that that same number of people were as overburdened with work. As a result they had to accumulate contracts and engage in private practice in order to make a decent living.

There also was the temptation to practice medicine without being fully prepared for it.

Remedies suggested included the organization of Rural Health Units, served from Rural Health Centres, and a system to minimum salaries for municipal doctors, such salaries to be increased with years of service.

Under such a system a member of a family would be sick enough to receive the Rural Health Centre where he would receive examination and treatment and would be hospitalized if necessary. Patients requiring major surgery or special treatment would be referred to the nearest District Hospital where treatment, not available at the centres, would be obtainable. Rare cases presenting difficulties in diagnosis or requiring necessary, often expensive surgery, hospital special treatments would be referred to larger centres in the bigger cities.

Commenting that District Hospitals should have full-time doctors on their staffs, the report commented that it is a "waste" to have well-trained surgeons engaged in general practice.
